Clearfix

Quickly and easily clear floated content within a container by adding a clearfix utility.

Easily clear `float`s by adding `.clearfix` **to the parent element**. Can also be used as a mixin.

Copy

```html
<div class="clearfix">...</div>
```

Copy

```scss
// Mixin itself
@mixin clearfix() {
  &::after {
    display: block;
    content: "";
    clear: both;
  }
}

// Usage as a mixin
.element {
  @include clearfix;
}
```

The following example shows how the clearfix can be used. Without the clearfix the wrapping div would not span around the buttons which would cause a broken layout.

Example Button floated left   Example Button floated right

Copy

```html
<div class="bg-info clearfix">
  <button type="button" class="btn btn-secondary float-left">Example Button floated left</button>
  <button type="button" class="btn btn-secondary float-right">Example Button floated right</button>
</div>
```
