# Cards

Bootstrap's cards provide a flexible and extensible content container with multiple variants and options.

About

A **card** is a flexible and extensible content container. It includes options for headers and footers, a wide variety of content, contextual background colors, and powerful display options. If you're familiar with Bootstrap 3, cards replace our old panels, wells, and thumbnails. Similar functionality to those components is available as modifier classes for cards.

Example

Cards are built with as little markup and styles as possible, but still manage to deliver a ton of control and customization. Built with flexbox, they offer easy alignment and mix well with other Bootstrap components. They have no `margin` by default, so use spacing utilities as needed.

Below is an example of a basic card with mixed content and a fixed width. Cards have no fixed width to start, so they'll naturally fill the full width of its parent element. This is easily customized with our various sizing options.

Copy

```
<div class="card" style="width: 18rem;">
  <img src="..." class="card-img-top" alt="...">
  <div class="card-body">
    <h5 class="card-title">Card title</h5>
    <p class="card-text">Some quick example text to build on the card title and
make up the bulk of the card's content.</p>
    <a href="#" class="btn btn-primary">Go somewhere</a>
  </div>
</div>
```

Content types

Cards support a wide variety of content, including images, text, list groups, links, and more. Below are examples of what's supported.

Body

The building block of a card is the `.card-body`. Use it whenever you need a padded section within a card.

> This is some text within a card body.

Copy

```
<div class="card">
  <div class="card-body">
    This is some text within a card body.
  </div>
</div>
```

Titles, text, and links

Card titles are used by adding `.card-title` to a `<h*>` tag. In the same way, links are added and placed next to each other by adding `.card-link` to an `<a>` tag.

Subtitles are used by adding a `.card-subtitle` to a `<h*>` tag. If the `.card-title` and the `.card-subtitle` items are placed in a `.card-body` item, the card title and subtitle are aligned nicely.

Copy

```
<div class="card" style="width: 18rem;">
  <div class="card-body">
    <h5 class="card-title">Card title</h5>
    <h6 class="card-subtitle mb-2 text-muted">Card subtitle</h6>
    <p class="card-text">Some quick example text to build on the card title and

    <a href="#" class="card-link">Card link</a>
    <a href="#" class="card-link">Another link</a>
  </div>
</div>
```

Images

`.card-img-top` places an image to the top of the card. With `.card-text`, text can be added to the card. Text within `.card-text` can also be styled with the standard HTML tags.

List groups

Create lists of content in a card with a flush list group.

Mix and match multiple content types to create the card you need, or throw everything in there. Shown below are image styles, blocks, text styles, and a list group—all wrapped in a fixed-width card.

Sizing

Cards assume no specific `width` to start, so they'll be 100% wide unless
otherwise stated. You can change this as needed with custom CSS, grid
classes, grid Sass mixins, or utilities.

Using grid markup

Using the grid, wrap cards in columns and rows as needed.

<table>

Images

Cards include a few options for working with images. Choose from appending "image caps" at either end of a card, overlaying images with card content, or simply embedding the image in a card.

Image caps

Similar to headers and footers, cards can include top and bottom "image caps"—images at the top or bottom of a card.

Image overlays

Turn an image into a card background and overlay your card's text.
Depending on the image, you may or may not need additional styles or
utilities.

natural lead-in to additional content. This content is a little bit longer.</p>
    <p class="card-text">Last updated 3 mins ago</p>
  </div>
</div>
```

Note that content should not be larger than the height of the image. If content is larger than the image the content will be displayed outside the image.

Horizontal

Using a combination of grid and utility classes, cards can be made horizontal in a mobile-friendly and responsive way. In the example below, we remove the grid gutters with `.no-gutters` and use `.col-md-*` classes to make the card horizontal at the `md` breakpoint. Further adjustments may be needed depending on your card content.

Copy

```
<div class="card mb-3" style="max-width: 540px;">

Mixins utilities

You can also change the borders on the card header and footer as needed,
and even remove their background-color with .bg-transparent.

Header

Success card title

Some quick example text to build
on the card title and make up the
bulk of the card's content.

Footer

```html
<div class="card border-success mb-3" style="max-width: 18rem;">
  <div class="card-header bg-transparent border-success">Header</div>
  <div class="card-body text-success">
    <h5 class="card-title">Success card title</h5>

make up the bulk of the card's content.</p>
  </div>
  <div class="card-footer bg-transparent border-success">Footer</div>

```

Card layout

In addition to styling the content within cards, Bootstrap includes a few
options for laying out series of cards. For the time being, **these layout
options are not yet responsive**.

Card groups

Use card groups to render cards as a single, attached element with equal
width and height columns. Card groups use `display: flex;` to achieve their
uniform sizing.

Need a set of equal width and height cards that aren't attached to one
another? Use card decks.

Grid cards

Use the Bootstrap grid system and its `.row-cols classes` to control how many
grid columns (wrapped around your cards) you show per row. For example,
here's `.row-cols-1` laying out the cards on one column, and `.row-cols-md-2`
splitting four cards to equal width across multiple rows, from the medium
breakpoint up.

When you need equal height, add `.h-100` to the cards. If you want equal
heights by default, you can set `$card-height: 100%` in Sass.

Card columns

Cards can be organized into Masonry-like columns with just CSS by wrapping them in `.card-columns`. Cards are built with CSS `column` properties instead of flexbox for easier alignment. Cards are ordered from top to bottom and left to right.

Heads up! Your mileage with card columns may vary. To prevent cards breaking across columns, we must set them to `display: inline-block` as `column-break-inside: avoid` isn't a bulletproof solution yet.

Card columns can also be extended and customized with some additional
code. Shown below is an extension of the `.card-columns` class using the same
CSS we use—CSS columns— to generate a set of responsive tiers for
changing the number of columns.

Copy

```
.card-columns {
  @include media-breakpoint-only(lg) {
    column-count: 4;
  }
  @include media-breakpoint-only(xl) {
    column-count: 5;
  }
}
```
